

MISSION & VISION

OUR MISSION

For more than 100 years, we have quarried, processed and supplied Belgian natural stone from our own quarries, supported by four generations of craftsmanship, with quality, service and customer satisfaction at the heart of everything we do.

OUR VISION

We want to be your reliable and sustainable partner in natural stone solutions, with personal service, reliable deliveries and careful follow-up of every project.

**We believe in natural stone
that lasts for generations.**

OUR VALUES AND STANDARDS

QUALITY CRAFTSMANSHIP

For more than four generations, craftsmanship has been at the heart of everything we do. From quarrying to finishing, we strive for quality in every detail. Every product is carefully inspected to ensure it meets the high standards for which Renier is known.

CONSCIOUS SUSTAINABILITY

With our own Belgian quarries and local production, we consciously choose a sustainable approach and a short supply chain. In our quarries, we generate green electricity for our own use and for electric vehicles. At our production site in Aarschot, we go one step further with intelligent energy storage and charging infrastructure, rainwater harvesting with buffering, water recovery and reuse of production water, processing sludge into soil conditioner for agriculture, and recycling stone waste for applications in hydraulic and road engineering. In this way, we reduce our ecological footprint and believe in natural stone that lasts for generations.

RELIABLE SERVICE

Smooth and correct cooperation is central to our approach. We think along with our customers, communicate transparently and ensure careful follow-up from order to delivery. Personal service, reliable deliveries and satisfied customers make the difference for us.
